

# TourPlanner Protocol

## UX

We designed a structured layout for the tour planner. On the left, there is the tour selection. Users can add new tours using the "+" button above the list. On the right, we display the selected tour's details, organized into tabs. The general tab shows the details, while the "Route" tab shows the route on a map (currently a placeholder image). Users can modify this information using the "Edit Tour" button or remove it via "Delete Tour". Below the details, we show a log list with past entries for the selected tour. Logs can be created, edited, or deleted using the respective buttons.
